

Australian Made Above Ground Pools

The Pool World range of above ground pools is proud to be 100% Australian – designed and manufactured. We use quality Australian steel pool wall manufactured by Bluescope, which is thicker and stronger than imported steel pool wall.

From the traditional Keppel and Stradbroke models, right through to the technologically advanced and cutting edge Hayman range with its injection moulded copings, Pool World has a pool to suit every taste and budget.

Our entire range is fully braceless, engineer designed and certified to be installed above the ground, partially in the ground or fully in the ground.

Top of the range pumps and the largest single cartridge filter offered on any above ground pool in Australia ensure your Pool World above ground pool is as maintenance free and enjoyable as possible.

With more than 2 decades of experience in above ground pool manufacture and design, Pool World is Australia's most awarded above ground pool manufacturer.
